

MUD DOG® 1200

12 YARD HYDRO EXCAVATOR

UNIQUE CAPABILITIES. DISTINCT ADVANTAGES

Super Products' 12-yard debris capacity hydro excavator – The Mud Dog® 1200 – features several unique capabilities that can increase job site performance, operator convenience and operational cost savings.

One of the unit's more valuable components is its rear-mounted boom that is capable of 19' to 27' reach, 335° rotation, 45° upward and 25° downward pivot. This impressive range of motion enables crews to achieve greater work area access and deeper digging without the need to halt production to reposition the trunk.

For fast, thorough and safe debris removal, the 1200 uses Super Products' exclusive ejector plate unloading system. And the unit's tilt-unloading feature ensures that liquids in the collector body are cleared quickly and efficiently even when unloading in an up-slope/nose down position.

In addition to the many standard features, an array of equipment options can be specified on the Mud Dog 1200 for customers to tailor the unit to best meet their toughest, most common job site challenges. And it's available with Super Products' latest innovation, the Acculevel™ Load Sensor System.
